

# Bottomline MedEx®

## Streamlines Healthcare Forms Management and Provides Rapid Access to Forms and Other Patient Information

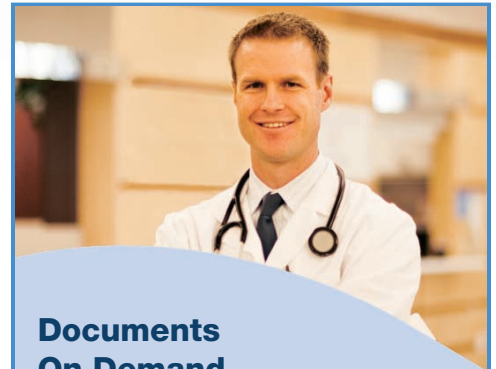

With MedEx from Bottomline Technologies, clinical personnel and administrators can easily access and produce standardized forms, barcoded patient wristbands and labels that include up-to-date patient information. Forms that reflect current patient data ensure positive patient identification and allow hospitals to optimize the efficiency and effectiveness of document-driven processes across the continuum of care.

MedEx's automatic indexing capabilities enable healthcare facilities to eliminate the expense and management hassles of pre-printed forms and significantly reduce time-consuming document preparation, quality assurance, manual scanning, indexing and filing processes.

MedEx accepts and securely stores HL7 and data stream feeds from virtually any hospital information system – without custom interface development. Barcodes can be dynamically rendered in popular barcode standards, enabling administrative staff to send forms more efficiently and properly index elements within leading electronic health record and imaging systems. MedEx can also provide access to mission-critical admission and registration activities during scheduled or unscheduled HIS downtime.

### Bottomline's MedEx Forms-On-Demand Solution Enables Healthcare Facilities to:

- **Improve clinician productivity.** MedEx enables immediate, on-demand access to clinical forms and reduces time spent on paperwork so clinicians can focus time and resources on patient care. Forms can easily be organized into logical sets with just the click of a button.
- **Accelerate processing time.** From a single, easy-to-use interface, users can select patients, forms and printers for document output. Powerful search capabilities enable users to instantly locate a desired patient or form, accelerating the delivery of time-critical patient information.
- **Reduce costs.** Automated forms routing and indexing enables hospitals to eliminate redundant, expensive pre-printed forms and reduce time-consuming prepping, quality assurance, manual scanning, indexing and filing processes.
- **Streamline administrative processes.** Standardized forms and up-to-date information enables hospitals to streamline administrative and patient care processes, while reducing bill payment cycle times.
- **Save storage space.** Secure electronic archiving removes the need for pre-printed forms, producing savings associated with paper document storage.
- **Boost patient satisfaction and safety.** MedEx's automated admission packets and positive patient identification assure patient-friendly registration and secure, up-to-date information at all times.

### Documents On Demand

MedEx enables anytime access to up-to-date patient demographic information, enabling caregivers to streamline the registration process and reduce the amount of time spent shuffling paper. This helps ensure positive patient identification and maximizes the efficiency of forms-intensive processes across the healthcare organization.

“Our nurses and other staff members would spend a lot of time assembling patient forms and hand-delivering them to their correct destinations. Now the forms are automatically populated with patient information and the patient packets, including wristbands, are directly printed on the proper floor, saving our staff valuable time and effort.”

Linda Kiefer  
Senior Electronic Forms and Imaging Analyst  
CMH Regional Health System

- **Enhance clinical processes.** MedEx enables users to make minor corrections to integrated data and eliminate duplicate records, which decreases the potential for costly errors.
- **Protect patient information and enable HIPAA compliance.** MedEx provides secure, password-protected access to forms and Protected Health Information (PHI). All actions are logged for tracking and reprint purposes according to HIPAA regulations.

### About Bottomline Healthcare Solutions

Bottomline's payments and medical forms automation, delivery and archive solutions are used today by more than 900 healthcare organizations nationwide. These organizations trust Bottomline's products and services to reduce costs, streamline document-intensive processes, improve productivity and ensure patient safety.

For more information about Bottomline MedEx or any of Bottomline's healthcare applications, visit [www.bottomline.com/healthcare\\_solutions](http://www.bottomline.com/healthcare_solutions) or contact a sales consultant at 1.800.472.1321, option 5.

*With just a few clicks, MedEx automatically populates the appropriate forms and documents with accurate information and rapidly prints them in collated form sets.*

*In admissions, MedEx enables staff to automatically generate forms packets to ensure efficient, patient-friendly registration. On the nursing floor, it provides caregivers with rapid access to forms on-demand, such as those for medication, orders, labs and graphical input/out flow sheets, so that they never have to spend valuable time searching for the correct, pre-printed forms.*
