

e.ComIntegrate™ and DesignStudio™

Advanced Document Design and Output Management

Business-critical documents such as purchase orders, pick lists and invoices have a direct impact on key business processes and can influence an organization's goals for reduced costs, increased staff productivity and improved customer satisfaction.

Working together, e.ComIntegrate and DesignStudio enable organizations to design, personalize and deliver documents in a more impactful, functional and relevant format that not only allows employees to work smarter and more efficiently, but increases the overall quality of customer, vendor and partner communications.

DesignStudio: Complete Document Design and Process Authoring

DesignStudio is a graphical, user-friendly solution that empowers organizations to create custom invoices, checks, purchase orders, bills of lading and other documents without extensive ERP programming or application changes. Users can add logos, graphics, barcodes, signatures, colors and conditional logic to standard business application output. The intuitive graphical design interface allows business analysts, programmers and process owners to compose and personalize documents based on business-specific requirements, giving control to those who understand the document and business application best. As a result, organizations can quickly and easily respond to changing document needs and reduce the costs associated with both pre-printed forms and expensive ERP code customizations.

e.ComIntegrate: Multi-Channel Distribution of Business Documents

e.ComIntegrate with DesignStudio is a solution allowing administrators to define the transactional document or process workflow of their application output. Once administrators define delivery preferences, documents can be distributed via a variety of channels, including print, fax, email and the Web. Using e.ComIntegrate, organizations can significantly improve the efficiency of their business document distribution based on the recipient's preferences, converting manual distribution processes into automated electronic processes.

e.ComIntegrate and DesignStudio

Feature	Benefit	Value
Full graphical process authoring	No programming skills required	Faster, less expensive implementations; easier to maintain business applications
Uses existing ERP system output	Straightforward implementations with no changes to ERP applications	No interruptions to vital business processes or costly changes to ERP
Supports ASCII, CSV, XML, RDI, SQL and PDF input	Compatible with all major ERP business applications	Works well in heterogeneous application environments
Multi-channel distribution	Easy to "burst" print jobs to multiple printers, email and fax	Reduces manual, error-prone processes
Multi-page/multi-format printing	Replacement of costly pre-printed forms	Process changes not dependent on paper
Comprehensive XML support	Broad range of inbound XML processing and outbound XML formatting and distribution	Single-vendor solution for traditional printed and structured output management
Full double-byte character support	Ability to render documents in all major global languages	Single-vendor solution for global operations
Supports complex processing logic	Document, content and distribution characteristics dynamically executed	Reduces manual intervention in document printing and distribution practices

e.ComIntegrate and DesignStudio Help Organizations:

- Lower the cost of ERP ownership by simplifying implementations, upgrades and maintenance
- Reduce administrative costs by automating document and report distribution
- Decrease consumable costs by minimizing over-printing and copying
- Optimize printer use with page condensing and duplex printing
- Increase supply chain efficiency with automated distribution of purchase orders
- Improve order fulfillment accuracy with legible pick, pack and shipping documents
- Boost customer satisfaction by personalizing invoices and statements
- Support global business operations with double-byte character set capabilities
