

ePay

The payment solution that efficiently manages and processes essential business payments

A simple, secure and reliable payments and collections solution specifically designed for UK businesses. Deployed as either a standalone (desktop) or server solution, ePay offers industry-leading performance at an affordable price, without compromising on functionality or security.

- Eliminates manual administration offering varying levels of automation, right up to full lights-out capabilities
- Minimises risk with sophisticated user access, limits, workflow security, encryption and reports
- Reduces submission errors with sort code and bank account validation
- Decreases operating costs and improves back-office efficiency
- Improves cash flow visibility and control
- Maximum flexibility with multiple UK payment methods

Efficient payments

Financial transactions form the lifeblood of every business. With a close eye on enhancing performance, reducing costs and improving cash flow, ePay delivers a secure, user-friendly UK payments and collections solution, ensuring your money gets to the right place at the right time, in the most cost-effective way. ePay was the first software solution to achieve Bacs approval for the Faster Payments Direct Corporate Access Service and is already used by many.

Streamlining processes

ePay simplifies and automates back office processes, minimising manual input and resource time, ensuring staff can focus on your core business. The Server edition offers configurable workflows with hierarchical user permissions as needed. Both the Standalone and Server editions can be moulded to suit your requirements and are adaptable as the business grows.

Mitigating risk

Internally, data integrity and security is delivered through user segregation, advanced workflows, automated notifications and complete reporting. The ePay Server edition provides a greater level of multi-user authorisation and processing limits and more comprehensive reporting capabilities. Externally, advanced mechanisms (TLS, PKI and encryption) ensure secure connectivity when submitting payments. Updated regularly from the EISCD (Extended Industry Sort Code Directory), ePay validates bank account and sort code information, performing a full modulus check and delivering warnings or error messages at a transaction and file level.

Integration and ease of use

ePay easily integrates with all mainstream accounting, payroll and ERP packages, collecting payment information in the first instance and reconciling information after processing. The solution includes processing wizards, user guides, tutorials and logical menu structures, making it exceptionally user-friendly.

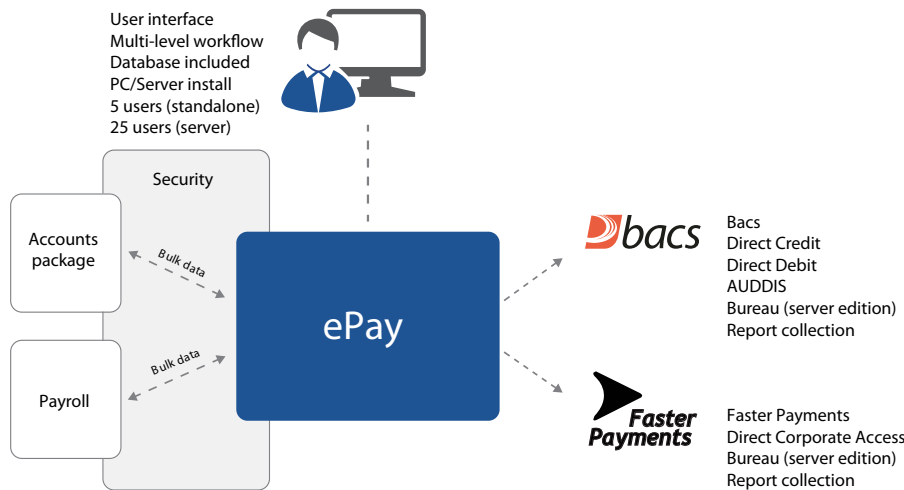

Visibility and control

Giving you clear visibility of what payments have been made or where in the process they are sitting, ePay delivers high level information before, during and after submission. The sophisticated ePay Server edition offers even more extensive reporting functionality – such as detailed audit trails, reconciliation reports, cash flow and notification of account changes.

Deployment options

Deployed as either a desktop or a server solution supporting client/server based installations, ePay has been developed using the latest Winforms and .NET framework technology. This means the program maintains a high degree of functionality and ensures it will run smoothly on the latest Windows operating systems. The software also harnesses the benefits of SQL and SQL Express for its database requirements.

How ePay works

Use ePay for all UK domestic payments:

- Bacs Credit
- Bacs Direct Debits (AUDDIS)
- Faster Payments
- Bureau (Server edition only)

For additional payment types (CHAPS, cheques, international payments), fully integrated Direct Debit Management functionality and more sophisticated levels of user authorisation, please consult our C-Series information sheet.

For client system and server requirements, please see the technical specification information sheets.

A quick guide to ePay Standalone and ePay Server

Features	ePay Standalone	ePay Server
Bacs	✓	✓
