Extend the Value of
Your ERP with Integrated
AP Automation

Many AP departments still rely on outdated, inefficient and paper-based processes. In doing so, they are limiting the AP team's productivity, delaying approvals of invoices and payments, and exposing themselves to unnecessary risk. All of this hurts AP's perceived value to the organization, as just 12% of businesses currently consider their AP function to be exceptionally valuable, per research from **Ardent Partners**.

Your ERP's built-in capabilities and our proven invoice and payment automation technology can take your team's performance to the next level. Even better, you can do so while keeping your system of record up to date and making new processes easy for your AP team to adopt.

With AP Automation, you can...

Simplify and accelerate processes

Improve your operations and process invoices nearly 80% faster by leveraging automated 2-way and 3-way matching capabilities and online exception handling. This reduces the manual input required from AP staff, thereby accelerating both invoice and payment processing and approval cycle times and allowing staff to focus on more strategic activities.

Do you really want to keep wasting time on inefficient processes?

Lower costs by removing paper

Reducing paper received and handled by your AP department has the potential to radically reduce operational costs. In fact, 39% of AP professionals say eliminating manual tasks is a top priority¹. AP automation makes that dream a reality.

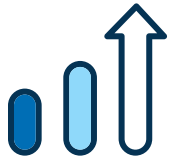

Can you afford to waste money manually processing paper-based invoices and payments?

Improve vendor relationships

Streamlining AP processes helps you pay your suppliers on time, or if you prefer, early. This has the potential to unlock available early payment discounts, form preferential terms, and strengthen relationships with regular suppliers.

Why strain key relationships and pay late fees?

Discover positive ROI

Complete the end-to-end invoice-to-payment lifecycle and generate positive ROI by converting to secure electronic payments, automating payment processes, and earning cash-back rebates on AP spend. With organizations realizing over 80% savings by automating payments and invoices, per Bottomline research, the ROI speaks for itself.

Why not transform AP into a profit center?

Integrate seamlessly with your ERP

Ensuring tight integration with your company's ERP is vitally important to make processes more efficient and predictable. Only 57% of businesses have enterprise-wide standardized processes, and the only way to achieve that and save both time and costs is to embrace integration.

Why not ensure finance data syncs to your ERP?

Gain visibility with end-to-end automation

For 45% of AP departments, improving reporting and access to data is a critical priority, one that can transform visibility for the organization. By storing documents more effectively, increasing transparency in processes, and generally creating smarter systems, better visibility is within reach.

Why not make visibility into invoices and payments a way of life at your organization?
