Bottomline

Access a Comprehensive Connection Hub to Swift and Other Payment Networks

The increasing globalisation of business means that organisations like yours need to connect with multiple banking partners across the world. This often results in treasurers and finance leaders resorting to manual and costly processes to get an accurate and global view of their liquidity across their portfolio and cross border payments from business operations.

This combined with the expense of connecting to multiple payment rails and networks on your own, makes the total cost of ownership a big challenge for organisations to meet.

Business Advantages

Connectivity Services from Bottomline provides a powerful messaging platform that addresses today's cost and risk concerns, allowing you to focus on your core value propositions and revenue generation. We offer full Swift connectivity via our hosted bureaus so you can benefit from a single, secure, and reliable window to communicate with all your banking partners using global standardised financial messages.

We offer connectivity options to suit your business size and requirements without the complexity around the setup and maintenance of infrastructure Existing Swift users also have the option to outsource their connectivity services to Bottomline.

Bottomline: Experts in Payments

Top 3 Swift service provider

Manage 15% of all international cross-border traffic

10 million Swift messages processed daily

We Offer:

➕ A cost model suited for businesses, (typically multi-national) with a requirement for high payment volumes to Swift from business operations, international treasury and/or financing activities.

➕ A single access point to standardise file transfers and messaging across all your banking partners, simplifying and maximising efficiency for your cash operations.

➕ Fully managed service and set-up of Swift connectivity – lightening the burden of handling this in-house with no need for additional resources to maintain the infrastructure.

➕ Tailored implementation to meet your specific needs with 24/7 customer support meeting regulatory requirements where needed.
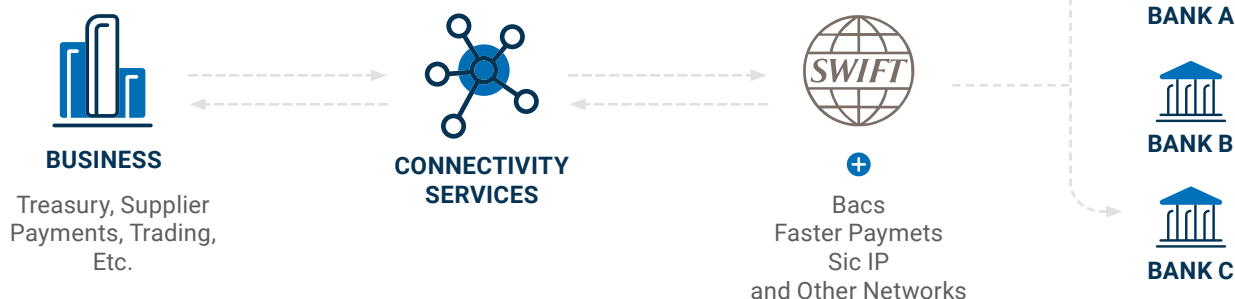

Swift Connectivity Supporting High Volume and Complex Messages From Multiple Parties
