

Paymode for Digital Banking Helps Protect Your Bank and Business Customers from Fraud

Your business customers' accounts receivable teams can feel secure knowing payments won't be misdirected

FOR BANKS AND FINANCIAL INSTITUTIONS

Secure Your Business Customers' Payments with Advanced Authentication and Verification

Fraud is growing in scope and sophistication every year, which makes protecting critical account information important. If a fraudster can impersonate businesses to steal a payment from them, a critical business relationship can be strained or destroyed, and their vendors may never receive the payment owed.

Paymode for Digital Banking prevents these losses by authenticating and verifying your business customers' bank account details with Plaid, the most secure solution in the market, and by protecting those details behind multiple layers of security. That ensures they never have to worry about fraudulent transactions, and their payers will never slow or stop payments due to fraud concerns. Plus, enabling Paymode for Digital Banking for your customers, you're also mitigating your own fraud risk.

We Keep Your Business Safe By:

- **Validating and storing critical bank account information**
- **Notifying the business if someone has compromised their email**
- **Protecting business relationships by ensuring payments aren't misdirected**
- **Strengthening business defenses against future attempts if they've recently dealt with fraud**

Each year, 550,000+ businesses exchange \$450 billion in payments through Paymode for Digital Banking without a single instance of fraud.

Know About BEC Attempts Before It's Too Late

Business email compromise is the single biggest fraud threat facing U.S. businesses, as one in three successful fraud attempts originated through email last year. Paymode for Digital Banking is built to protect you, your business customers, and their vendors from this scourge.

Bottomline will notify every business on the network directly if we see that someone is attempting to access the network with false credentials or a spoofed email, blocking the attempt in the process. That ensures payments aren't re-routed and that your business customers have early warning so they can take the necessary steps to lock fraudsters out of their accounts.
