

TAP for JDE: Modernize AP Without Replacing Your ERP

Speed, accuracy, and transparency are the pillars of an efficient accounts payable team. Yet, for many finance teams running JD Edwards Oracle, the process of overhauling or replacing a preexisting ERP integration is often perceived as costly and tedious.

It doesn't have to be. Bottomline's Transform Accounts Payable (TAP) functionality for JD Edwards offers a seamless way to streamline and automate AP operations on a preexisting Oracle ERP integration. Let me explain how.

What is TAP for JD Edwards?

What Bottomline offers is a fully integrated AP automation solution with Oracle JD Edwards EnterpriseOne. TAP automates invoice capture and matching, reduces manual data entry, and allows for streamlined processing overall, which minimizes the risk of human error and speeds up turnaround time. Efficiency and accuracy are the goals and have been for well over a decade.

TAP can help accounts payable departments reduce their piles of paper invoices, establish a reliable workflow, and have a consistent view of the work in front of them. TAP provides real-time dashboards and audit trails, which better equip AP managers with a window into invoice statuses, potential bottlenecks, and compliance metrics.

What Makes TAP for JD Edwards Unique?

TAP for JD Edwards is one of the very few fully JDE-integrated AP automation solutions on the market. Traditionally, JD Edwards users who wanted to use the ERP for invoice solutions would need to live with the limited functionality available to them, jerry rig a solution of their own, or seek out a non-ERP-specific solution.

Bottomline's Transform Accounts Payable (TAP) functionality for JD Edwards offers a seamless way to streamline and automate AP operations on a preexisting Oracle ERP integration.

More than just an invoicing solution, Transform AP is a fully integrated solution, which carries obvious benefits for business users who live and breathe their ERP daily. Customers prize that level of integration because it eliminates friction points and makes every aspect of processing invoices easier.

TAP for JD Edwards delivers best-in-class invoice automation with the tightest possible systems integrations, all without the expensive customization, training, or additional license purchasing that often accompany most other corporate AP functions on the market.

This application sits within Oracle EnterpriseOne to support real-time processing with no batch uploading of data, a plus because that is a process which often results in data integrity issues. Customers like Taubman, an international company that owns and leases outlet shopping centers in the U.S. and Asia,

“We wanted to automate and streamline the entire AP and payables process— all the way from receipt through capture to matching coding and routing for approvals and payment. Most importantly, the technology had to integrate with our ERPs and enable mobile invoice approvals.”

Kim Hughes VP Controller, Taubman

Why It Matters

AP modernization should not have to mean starting from scratch. TAP for JD Edwards allows organizations to develop and evolve their AP processes, while also preserving existing investments made in JD Edwards Oracle.

That matters because of the backdrop in the world of finance as we write this. Budgets are strained, teams are stretched to capacity, and a wholesale switchover to new technology doesn't fit into the time and money available to most businesses. Being able to better use a familiar ERP that has served your company well and save both hours and dollars over time processing invoices matters a great deal, given that the alternative is learning new processes at the cost of great expense and effort.

System overhauls are daunting, and TAP is a recognized solution to empower finance leaders in their transition to a paperless, streamlined AP workflow, while preserving their preexisting work with JD Edwards Oracle EnterpriseOne.

Why start over when you can keep your momentum going?

Transform AP is a fully integrated solution, which carries obvious benefits for business users who live and breathe their ERP daily.

Ready to smooth out the bumps in your AP process?
